Industry members once again described the event as “inspiring”, “useful”, “valuable”, and “enjoyable”.

The Swiss Robotics Industry Day took place on 2 Nov 2017 at the SwissTech Convention Center in Lausanne for the fourth consecutive year. In this edition, organized in conjunction with digitalswitzerland, and sponsored by the Canton Vaud, we had the honour of welcoming Federal Councillor Johann Schneider-Ammann and EPFL President Martin Vetterli, along with industry and academic representatives.

We are also glad to announce that this edition marked a significant participation increment, with over 90 world-wide renowned robotics companies present and actively networking around the 70 posters and 50 technology demonstrations including 20 company booths.

The event successfully offered invited guests the chance to learn about investment opportunities and state of the art technology spin-offs and SMEs. Participants also experienced cutting edge technology demonstrations and were able to discuss future trends in robotics with the experts. Start-ups and researchers also had the opportunity to create new business links and forge new contacts.

Alongside this programme, this year’s Swiss Robotics Industry Day proposed a diverse and dynamic group of speakers, both from research and industry, as well as panellists who provided in-depth expert insights into the future of robotics.

We would like to thank our sponsors and all the participants: guests, speakers and exhibitors for making the event a success. We are looking forward to welcoming you again for next year's edition on 1 November 2018 at the SwissTech Convention Center in Lausanne.

NCCR Robotics

The National Centre of Competence in Research (NCCR) Robotics is a Swiss nationwide organisation, funded by the Swiss National Science Foundation (SNSF), pulling together top researchers from all over the country with the objective of developing new, human oriented robotic technology for improving our quality of life. The Centre was opened on 1st December 2010 and binds together experts from four world-class research institutions: Ecole polytechnique fédérale de Lausanne (EPFL) (leading house), Eidgenössische Technische Hochschule Zürich (ETH Zürich) (co-leading house), Universität Zürich (UZH), Istituto Dalle Molle di Studi sull’Intelligenza Artificiale (IDSIA), for a period of up to 12 years. We are at the forefront of robotics research and develop robots that co-exist symbiotically with humans in order to enable them to help both individuals and society.
Industry members once again described the event as "inspiring", "useful", "valuable", and "enjoyable".
